MRI - PELVIS AND ABDOMEN SCREENING WITH CONTRAST

Scan Protocol: T1 SE and STIR Coronal, T2 FSE and T1 SE Axial. GRE, DWI followed by contrast in three planes

FINDINGS

Uterus is normal size anteverted measuring 6.2x4.5x3.8cm . There is n. Endometrial thickness is 7 mm.

The parametrial fat planes are preserved.

No focal lesion or abnormal enhancement seen in the myometrium or endometrium

Cervix is normal

Right ovary measures 3.7x1.9x1.6 cm

Left ovary measures 3.6x2.0x1.8cm

Mild-moderate free fluid seen in the abdomen and pelvis and diffuse peritoneal fat stranding

Urinary bladder appears normal.

Visualised bowel loops appear normal.

No adenopathy is seen.

The visualised osseous structures are normal.

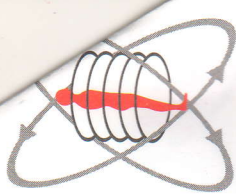

The muscular and soft tissue planes are normal with no edema / collection.

Liver is mild enlarged in in craniocaudal extent. There is no focal lesion in the liver

No IHBR dilatation seen

Gall bladder is normal. Normal CBD . No filling defect seen

Spleen is borderline enlarged normal configuration and density. No focal lesion seen

MEGAVISION DIAGNOSTIC CENTRE

Pancreas appears mild swollen and shows diffuse T2 hyperintense signal and adjacent edema and STIR hyperintense signal

Both adrenals are well visualised and appear normal

Both kidney appear normal in size, shape and configuration and show no obstructive changes

Aorta and its branches, inferior vena cava and its tributaries shows normal flow signal

No significant mesenteric or retroperitoneal lymphadenopathy

The small and large bowel loops are normal in course and caliber

Moderate left pleural effusion

Impression

- Normal size and morphology of uterus
- Normal size of ovaries. Normal endometrial thickness
- Mild-moderate ascites and diffuse mesenteric and peritoneal fat stranding
- Mild hepatosplenomegaly
- Moderate left pleural effusion
- Diffuse swelling and edema like signal in pancreas -may represent acute pancreatitis

Needs clinical and lab parameter correlation
